

N600R Login password setting

Forget the router's user name and password, how to do?

It is suitable for: N600R, A800R, A810R, A3100R, T10, A950RG, A3000RU

Application introduction: Just like the keys on the door, the management password (login password) is the credentials of the login router. If you forget your router's management password, like losing the pocket of the key, is unable to enter the house.

> **USER LOGIN** The server 192.168.0.1 requires a username and passwo password **User Name** Password The Password is wrong **LOGIN**

Note: The login window will show the router model, please be sure to be your own router interface.

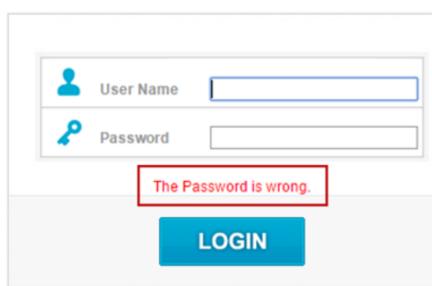

Solutions

STEP-1: Try entering a password

If you do not forget to set a good password, you can only restore the router factory settings, no super password.

Before returning to the factory, try entering a possible management password.

USER LOGIN The server 192.168.0.1 requires a username and password.

Default username:admin Default password:admin Account number and

1. Try to enter:

password is your own settings, please try to recall the possible account and password and enter

Advanced Setup

If the two methods suggest that the password is wrong, please restore the router to factory settings, that is, reset the router.

STEP-2: Restore the router to factory settings In the router shell side to find the router Reset button.

The router is working properly, hold down the Reset button for more than 5 seconds, release the button. When all the indicators are lit,

it indicates that the reset is successful. Note: After restoring to factory settings, all configurations change to their default values.

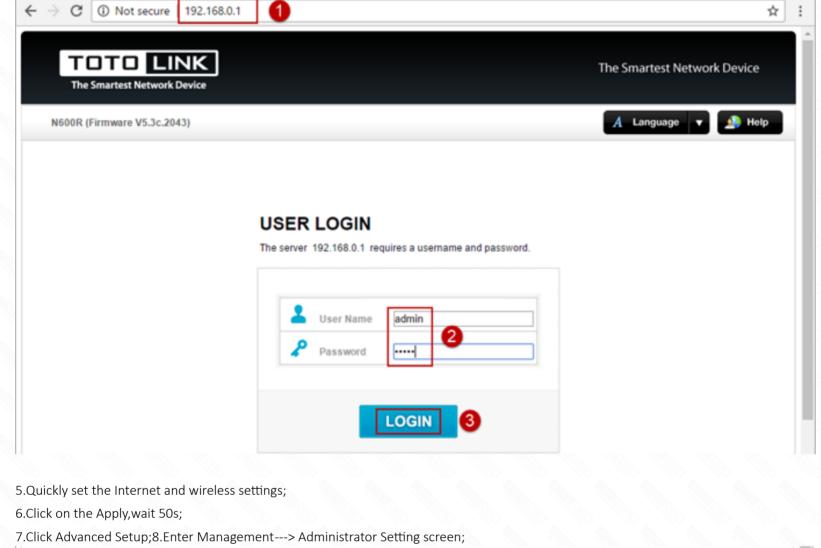

1.open the browser; 2.enter the gateway: 192.168.0.1 or 192.168.1.1;

STEP-3: Restore the router to Re-set

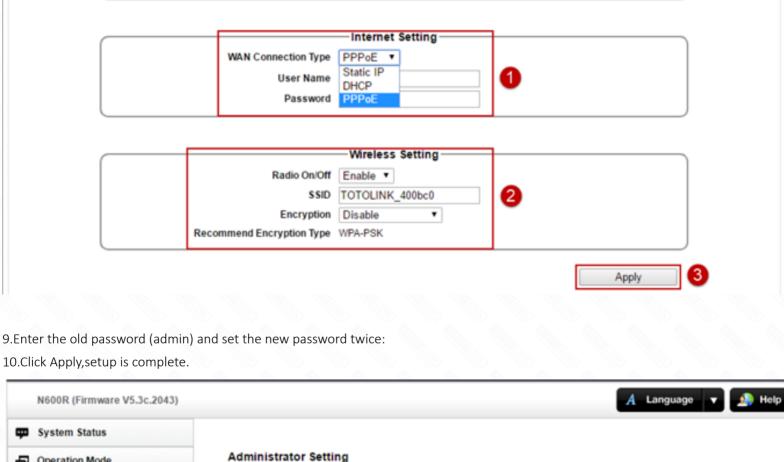

3.enter the default login account and password: admin admin; 4.login interface;

TOTOLINK

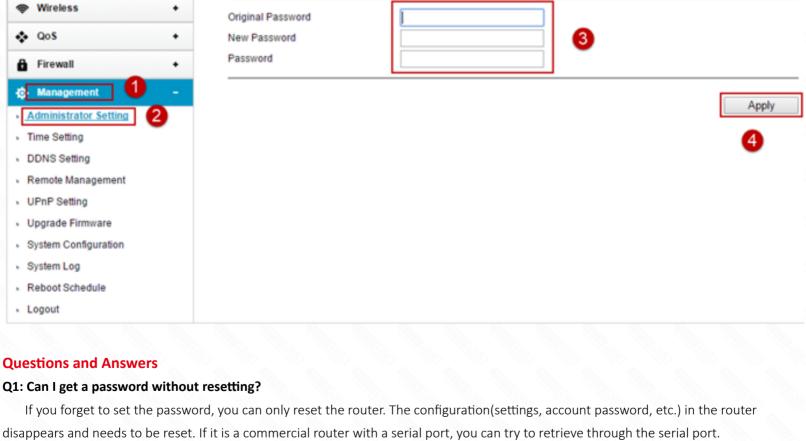

The easy setup will guide you to configure AP for first time.

(that is, the indicator light is not flash, bright, full bright reset the performance of the state), there may be reset key hardware problems need to follow the after-sales process.

Q2: Reset button (Reset) is broken or can't be reset successfully, how do?

Q3: How are the settings are wrong password?

Please follow the reset operation in strict accordance with the instructions, if the operation can't be reset after a number of operations

A. Do not follow the prompts on the page to set, please be sure to see the request to enter the user name password; B. The login page is not your router, it may be the wrong connection to the cat, into the cat interface. If the interface does not display

the correct router model, please re-confirm and connect; C. The browser cache is causing you to try to replace the browser or clear the cache.

Password error is certainly a reason, if the reset is prompted after the error, the following may be:

Q4: Use third-party software to manage router descriptions Our router does not support third-party software management, does not recommend the use of such software, please use the browser management.

Like can't enter the house, there may be lost the key, take the wrong key, into the wrong door, etc., there is a specific reason, need to observe and carry out effective operation try, as soon as possible to resume normal use. In addition, also need to back up important configuration, record the password to prevent forgetting.
